To

- ECC List A
- EFIS (main account)
- PMSE (National Implementation of Recommendation 25-10)
- Fixed Service (National Implementation of FS Recommendations)
- Short Range Devices (National Implementation of Recommendation 70-03)
- Document Database DocDB (National Implementation of ECC Decisions and Recommendations)

**Subject: Request to provide National Contact Point Information for national coordinators of the EFIS and the ECC Document Database**

The ECO is updating the security for the log-in to your national information held in the ECO Frequency Information System (EFIS) and the ECC Document Database (DocDB).

This letter is requesting confirmation of your national contact person for;

- EFIS;
- PMSE - National Implementation in Recommendation 25-10;
- Fixed Service - National Implementation of all 26 Fixed Service Recommendations;
- Short Range Devices - National Implementation in Recommendation 70-03;
- DocDB - National Implementation.

An important element of the adoption of CEPT harmonisation measures is the administration commitment<sup>1</sup> to **ECC Decisions** and, in particular, CEPT administrations are required to inform the Office on national implementation measures used to commit themselves to an ECC Decision. Moreover, CEPT administrations are invited to indicate whether they are implementing an **ECC Recommendation**<sup>2</sup>. In order to facilitate the communication of the relevant information to the Office, an online process has been setup to allow CEPT administration to manage individually the information in the ECO database (DoCDB), on the implementation of ECC Decisions and ECC Recommendations.

Presently, CEPT administrations can upload, maintain and edit their national information in EFIS and DocDB using a log-in and password previously provided by the ECO.

These log-in and passwords were often simplistic and do not provide adequate protection for the data of CEPT administrations.

ECO is therefore introducing a new two-stage log-in to ensure the data provided by CEPT administrations remains secure. This new security procedure will send a unique personal identification number (PIN) to an email address nominated by the administration each time a log-in attempt is made.

Presently when an administration attempts to log-in the PIN is automatically generated.

---

<sup>1</sup> See Rules of Procedure, Article 12.3 (for ECC Decisions)

PIN

Pressing the submit button then opens access to the national data.

In future, this PIN will be sent by email to the national registered email. Log-in may only proceed once that PIN is correctly entered into the EFIS or the DocDB.

To ensure this enhanced security can be brought into use, you are requested to complete the following table of national contact points.

	Name of National Contact	Email Address of National Contact	Date last Logged-on
<b>EFIS (main account)</b>			
<b>PMSE (National Implementation of Recommendation 25-10)</b>			
<b>Fixed Service (National Implementation of FS Recommendations)</b>			
<b>Short Range Devices (National Implementation of Recommendation 70-03)</b>			
<b>Document Database DocDB (National Implementation of ECC Decisions and Recommendations)</b>			

Your assistance in facilitating the introduction of this enhanced security of your national data is very much appreciated. We kindly ask you to provide your feedback to Ms Anne-Dorthe Hjelm Christensen [anne-dorthe.hjelm.christensen@eco.cept.org](mailto:anne-dorthe.hjelm.christensen@eco.cept.org) before 30 May 2021.

Best regards

Per Christensen  
Director
